

Wetlands

SAN JOSE
WATER

San Jose Water created these wetlands as an integral part of its Los Gatos watershed stewardship. Healthy wetlands provide clean water, store and slow down stormwater, protect creek banks from erosion, and provide habitat for wildlife.

These constructed wetlands, riparian woodlands, and the adjacent lands support native species such as California red-legged frog, western pond turtle, coast live oak, and toyon.

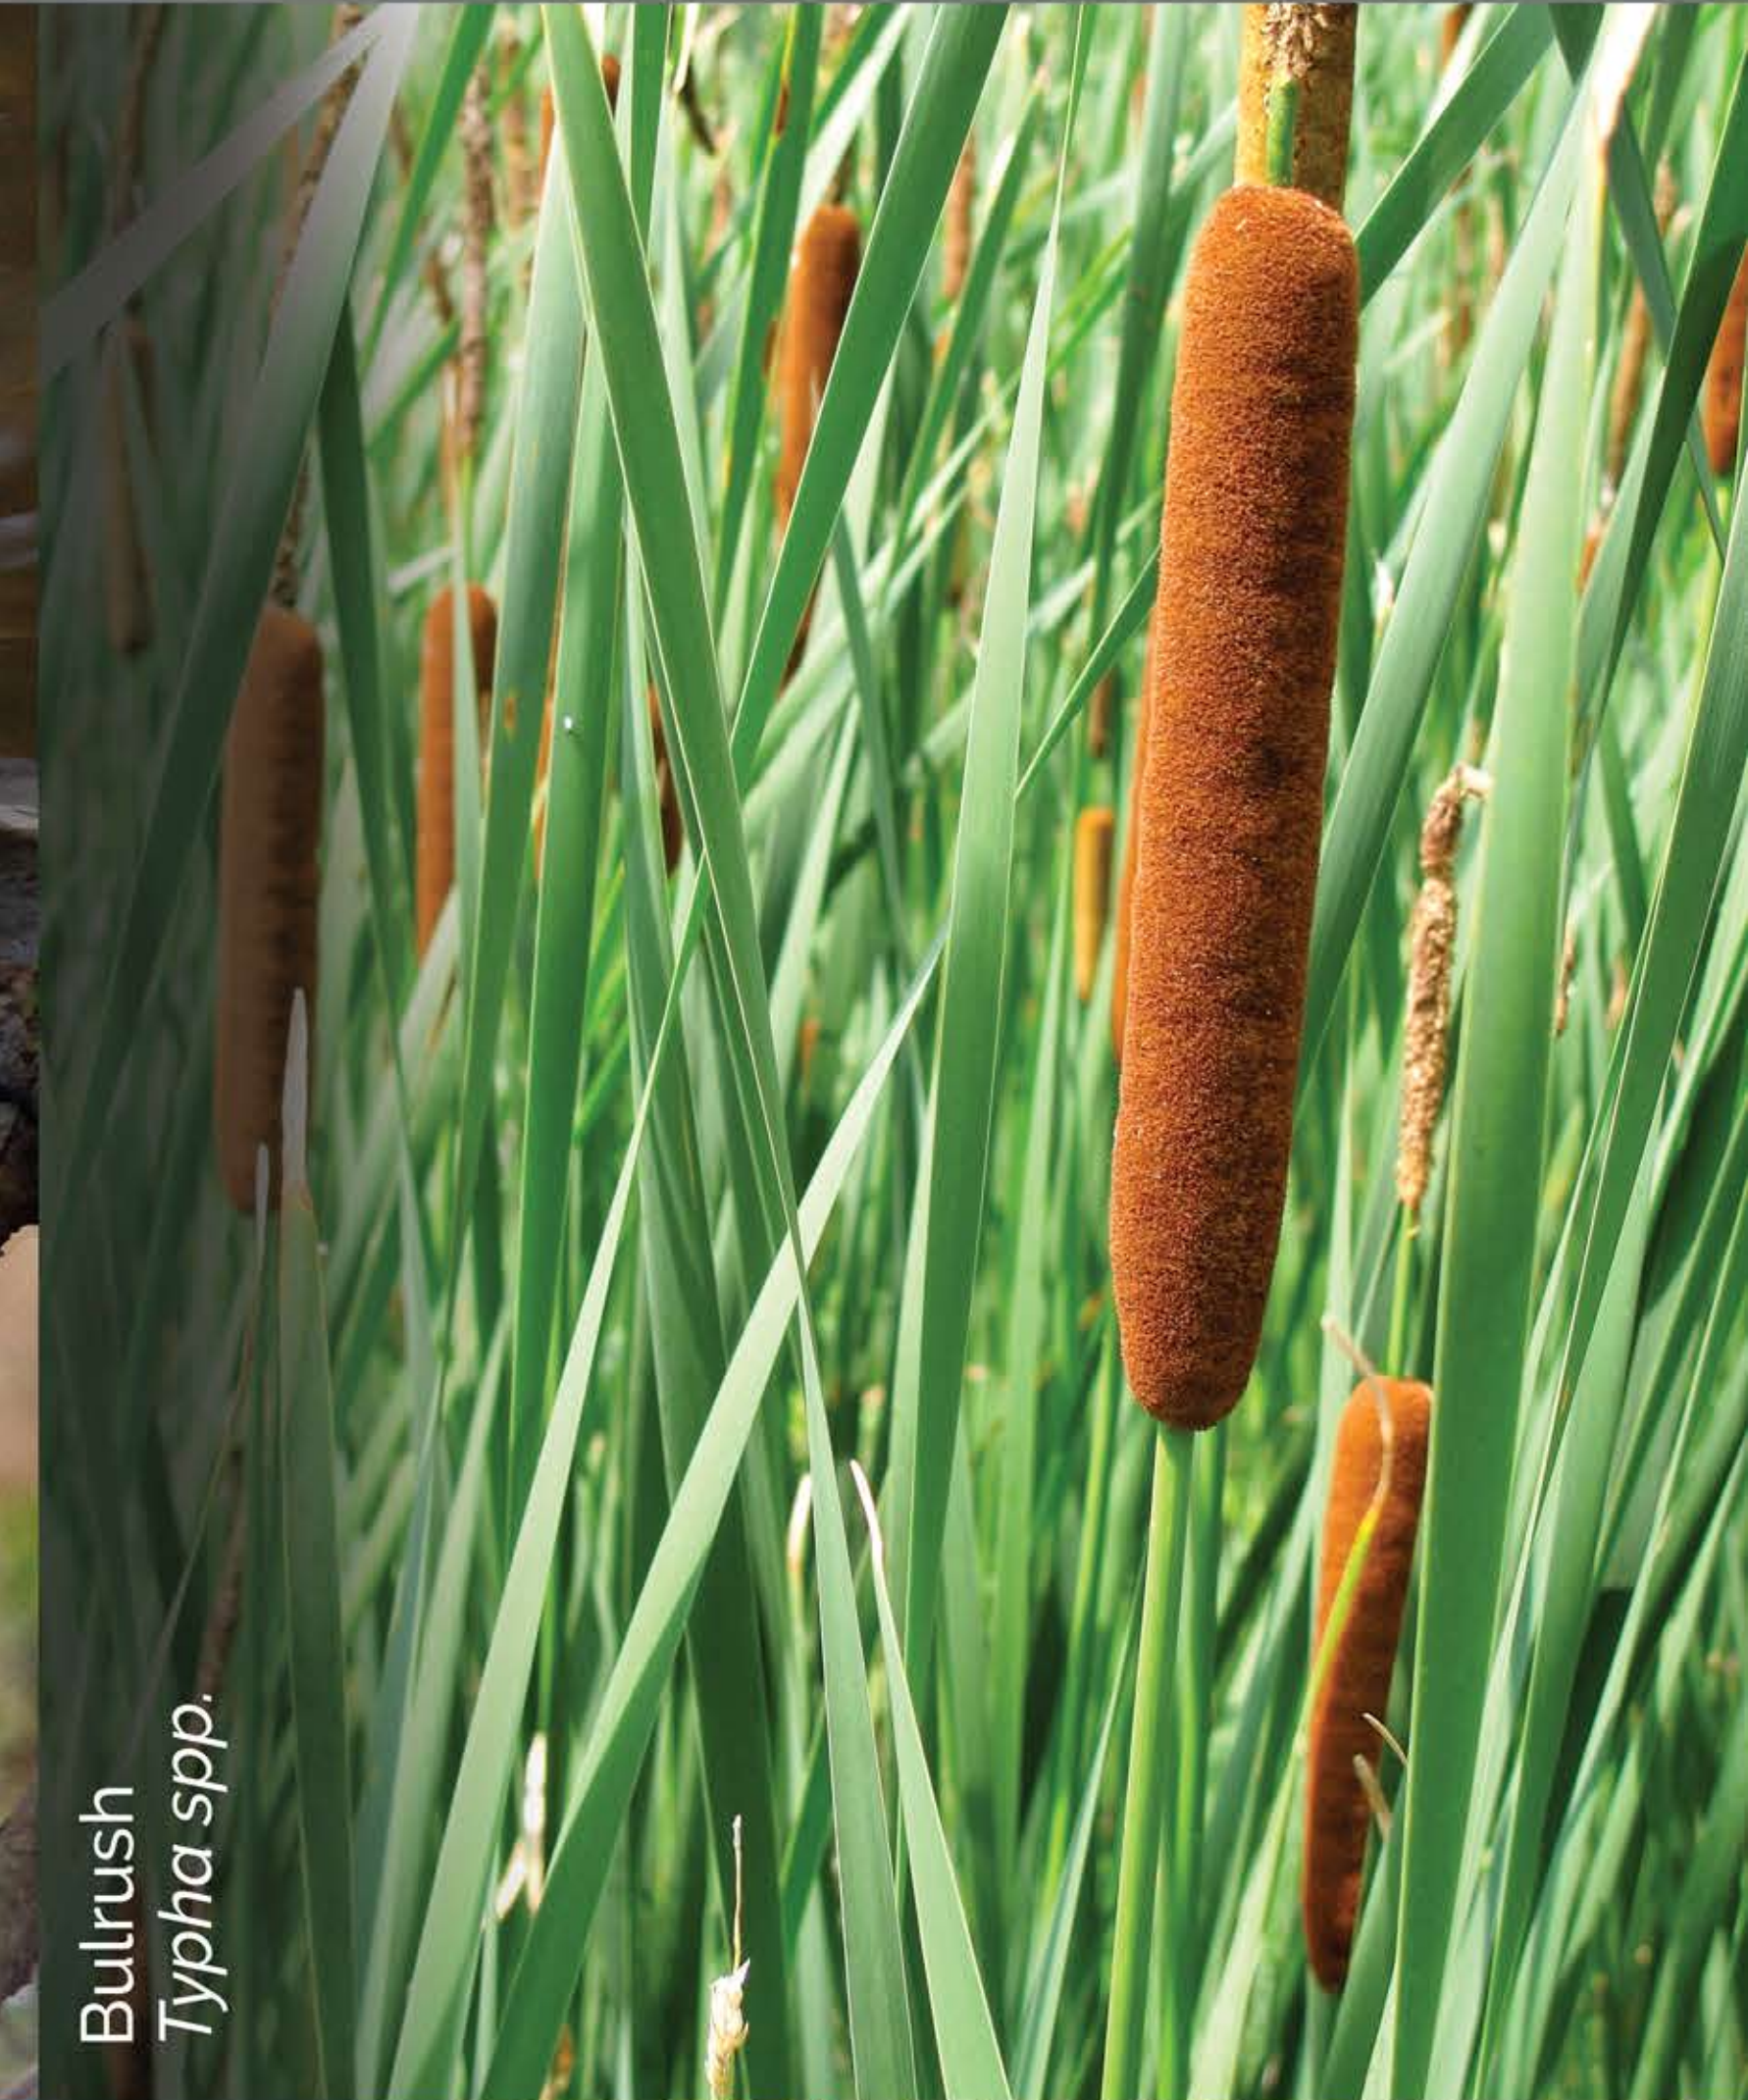

California Red legged Frog
Rana draytonii

Western Pond Turtle
Actinemys marmorata

Black-crowned Night Heron
Nycticorax nycticorax

Bulrush
Typha spp.

Coast Live Oak
Quercus agrifolia

Toyon
Heteromeles arbutifolia
